US-09-292-225-15		
; Sequence 15, Application US/0929225		
; Patent No. 6455686		
; GENERAL INFORMATION:		
; APPLICANT: McCall, Catherine A.		
; APPLICANT: Hunter, Shirley Wu		
; APPLICANT: Weber, Eric R.		
; TITLE OF INVENTION: NOVEL DERMATOPHAGOIDES NUCLEIC ACID MOLECULES, PROTE:	ID MOLECULES,	PROTE
; TITLE OF INVENTION: AND USES THEREOF		
; FILE REFERENCE: AL-2-C3		
; CURRENT APPLICATION NUMBER: US/09/292,225		
CURRENT FILING DATE: 1999-04-15		
; EARLIER APPLICATION NUMBER: 60/098,909		
; EARLIER FILING DATE: 1998-09-02		
; EARLIER APPLICATION NUMBER: 60/085,295		
; EARLIER FILING DATE: 1998-05-13		
; EARLIER APPLICATION NUMBER: 60/098,565		
; BARLIER FILING DATE: 1998-04-17		
; EARLIER APPLICATION NUMBER: 09/062,013		
; EARLIER FILING DATE: 1998-04-17		
; NUMBER OF SEQ ID NOS: 49		
; SOFTWARE: Patentin Ver. 2.0		
; SEO ID NO 15		
; LENGTH: 555		
; TYPE: PRT		
; ORGANISM: Dermatophagoides farinae		
US-09-292-225-15

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ద
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ద
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 18, Application US/0929225

Patent No. 645566

RENERAL INPORMATION:
APPLICANT: Muccall, Catherine A.
APPLICANT: Muccall, Catherine A.
APPLICANT: Muccall, Catherine A.
APPLICANT: Weber, Eric R.
TILLE OF INVENTION: NOVEL DERMATOPHAGOIDES NUCLEIC ACID MOLECULES, PROTEINS
TITLE OF INVENTION: NOVEL DERMATOPHAGOIDES NUCLEIC ACID MOLECULES, PROTEINS
TITLE OF INVENTION: NOW USER THEREOF
FILE REFERENCE: AL-2-C3
CURRENT FILING DATE: 1999-04-15
EARLIER APPLICATION NUMBER: 60/098,909
EARLIER APPLICATION NUMBER: 60/098,505
EARLIER APPLICATION NUMBER: 60/098,565

Patent No. 6416977
GENERAL INFORMATION:
TITLE OF INVENTION: FLEA CHITINASE NUCLEIC ACID MOLECULES, PROTEINS AND TITLE OF INVENTION: USES THEREOF
PILE REPERENCE: FC-5-C1
CURRENT APPLICATION NUMBER: US/09/545,814
CURRENT APPLICATION NUMBER: 06/128,833
PRIOR PILING DATE: 1999-04-09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        6 LLAVLCALAISSINTV----EASDQKARIVCYFSNWAVYRPGIGRYGIEDIPVDLCTHIV

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A Accession: S61551
A Status: nucleic acid sequence not shown
A Molecule type: mRMA
A; Residues: 1-405 < AMOR1>
A; Cross-references: EMBL:X93035; NID:g1085065; PIDN:CAA63603.1; PID:g1085066
R; Morrison, B.W.
Submitted to the EMBL Data Library, November 1995
A; Reference number: 861550
A; Rocession: 861550
A; Molecule type: mRNA

"Structure of human ohitotriosidase. Implications for specific inhibitor design and function of mammalian chitinase-like lectins.";

J. Biol. Chem. 277:25537-25544(2002).

-! FUNCTION: Degrades chitin and chitotriose. May participate in the argumatic activity.

-! CATALYTIC ACTIVITY: Hydrolysis of the 1,4-beta-linkages of N-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   macrophages.

POLYMORPHISM: A 24 bp duplication in exon 10 leads to the activation of an alternative splice site and the production of an inactive protein. About 6% of the population are deficient for CHITI activity, while 35% are carriers and show reduced enzyme levels. People with CHITI deficiency appear perfectly healthy. MISCELLANBOUS: Patients with type I Gaucher disease (GD I) [MIM.230800] have very high plasma levels of CHITI, and this can be used as diagnostic aid and to evaluate the success of treatment. Successful therapy brings the CHITI activity levels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SIMILARITY: Belongs to chitinase class II (family 18 of glycosyl hydrolases).
SIMILARITY: Contains 1 chitin-binding type-2 domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      -1- SUBGELLUAR LOCATION: Secreted. A small proportion is lysosomal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TISSUE SPECIFICITY: Detected in spleen. "Chtrinases are a multi-gene family in Aedes, Anopheles and
Droschila.";
-!- CATALYTIC ACTIVITY: Hydrolysis of the 1,4-beta-linkages of N-
acetyl-D-glucosamine polymers of chitin.
-!- SIMILARITY: Belongs to chitinase class II (family 18 of glycosyl
hydrolases).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MEDLINE=22426071; PubMed=12537574;

-!- CATALYTIC ACTIVITY: Hydrolysis of the 1,4-beta-linkages of N-acetyl-D-glucosamine polymers of chitin.
-!- SIMILARITY: Belongs to chitinase class II (family 18 of glycosyl hydrolases).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ycosidas; Chitin degradation; Chitin-binding; Repeat. 178 534 CHITIN-BINDING TYPE-2 1. Marshall J.T.A., Nancarcow C.D., Brownlee A.G.;

"Cloning and sequencing of a CDNA encoding an ovine
costrus—associated oviducal protein.";

"Exprod. Fertil. Dev. 8:305-310(1996).

"I FUNCTION: Binds to cocyte zona pellucida in vivo. May play a role
in the fertilization process and/or early embryonic development.

"I SUBCELLULAR LOCATION: Secretory granules.

"I TISSUB SPECIFICITY: Oviduc.

"I TISSUB SPECIFICITY: Oviduc.

"I TISSUB SPECIFICITY: Oviduc.

"I DEVELOPMENTAL STAGE: Levels are highest in the fimbria and ampulla
te strins and nday 1 of pregnancy, when gamete transport and
fertilization occurs in the E2-dominated fallopian tube. Levels
decline significantly on day 2 and undergo a further significant
reduction on day 3 of pregnancy coincident with transport of the
embryo from the oviduct to the uterus, a reproductive stage
associated with rising progesterone levels.

"I SIMILARITY: Belongs to family 18 of glycosyl hydrolases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This SWISS-PROT entry is copyright.                                                                                              zona pellucida-binding glycoprotein.";
Biochem. J. 295:437-445(1993).
-!- FUNCTION: Binds to occyte zona pellucida in vivo. May play a role in the fertilization process and/or early embryonic development.
Might act as a protective secretion influencing the first steps of the reproductive process necessary for the normal triggering of fertilization and early embryonic development.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MEDLINE=94058981; PubMed=8240241;

                                                                                                                      Coville G.;
Submitted (DEC-2000) to the EMBL/GenBank/DDBJ databases.
-- FUNCTION: Binds to occyte zona pellucida in vivo. May play a roll in the fertilization process and/or early embryonic development.
-- SUBCELLULAR LOCATION: Secretory granules.
-- TISSUE SPECIFICITY: Oviduct.
-- SIMILARITY: Belongs to family 18 of glycosyl hydrolases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 72;

"Human synovial cells secrete a 39 kDa protein similar to a bovine
"Human synovial cells secrete a 39 kDa protein similar to a bovine
mammary protein expressed during the non-lactating period.";
Biochem. J. 269:265-268(1990).
-!- FUNCTION: May play an important role in the capacity of cells to
-sespond to and cope with changes in their environment.
-!- SUBCELLULAR LOCATION: Extracellular.
-!- TISSUE SPECIFICITY: Extracellular.
-!- TISSUE SPECIFICITY: Present in articular chondrocytes, synovial
cells as well as in liver. Undetectable in muscle tissues, lung,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (GP)
